

DIVAK MAHESHWARI

San Francisco, CA | (669) 212-1714 | divak.m14@gmail.com | [LinkedIn](#) | [GitHub](#)

Work Experience:

Stealth Cybersecurity Startup | Founding Engineer | San Francisco, CA

Present

- Working on Zero Trust Security infrastructure

Schweitzer Eng. Labs | Software Engineer – Automation & Infrastructure | Pullman, WA

2026

- Maintained and extended the core Python library and backend services that power a firmware testing platform for safety-critical protective relays, serving internal engineering teams as customers
- Eliminated a class of silent parsing failures by redesigning the regex state-matching engine to handle malformed and edge-case inputs, thereby protecting test-result integrity
- Resolved a Python 3.12 regression that blocked the test engine and modernized legacy tooling into modular components, restoring reliability across all deployment targets
- Hardened Linux-based telemetry processing by closing a silent data-corruption path at ingestion through URL normalization and input sanitization
- Achieved 100% branch coverage for the platform with mypy, pylint, and flake8 enforced in CI, catching regressions before merge
- Independently scoped and shipped 6+ features across parser logic, protocol layers, and test infrastructure for a system that other engineering teams depend on

Dell Technologies | Software Engineer

2023 - 2025

Recommendation Engine & NIS Migration: Santa Clara, CA

- Designed and built a modular recommendation engine using Python, Docker, and REST APIs to deliver personalized, real-time product suggestions for financial planning
- Led the 0→1 redesign and implementation of a Python-based NIS auto-configuration system, replacing legacy Bash scripts with a multi-distro Linux solution (Ubuntu, CentOS, SLES) and improving execution time by 40%
- Automated SSH-based system provisioning using the regex and subprocess modules, ensuring reliable deployments across environments
- Improved execution performance of system configuration workflows by optimizing the automation pipeline structure and reducing manual intervention

TinyML with Flatpak Application Distribution: Santa Clara, CA

- Developed and deployed a TinyML model using TensorFlow Lite, NumPy, and Scikit-learn to predict NVMe drive failures with 96.5% accuracy, enabling proactive maintenance
- Packaged the model as Flatpak application for multi-distro Linux deployment, enabling low-latency edge inference
- Built early-warning algorithms that predict drive failures up to 10 days in advance, reducing resource system downtime

Microservices-based telemetry processing: Round Rock, TX

- Designed a scalable telemetry pipeline using Apache Kafka, Docker, and PostgreSQL, processing over 6M device events and delivering real-time updates
- Built Python and Java microservices for device telemetry ETL workflows, enabling reliable data ingestion and transformation for the analytics team
- Automated data ingestion and transformation using Linux Bash scripting, improving data integrity for downstream Power BI dashboards

Skills:

Programming Languages: Python, C++, C, Java, JavaScript, TypeScript, Bash, Swift, Go

Frameworks: Pandas, NumPy, TensorFlow, TensorFlow Lite, PyTorch, Scikit-learn, XGBoost, Flask, Firebase, React

Data & Infrastructure: Docker, Linux (Ubuntu, CentOS, SLES), Apache Kafka, PostgreSQL, REST APIs, Power BI, SSH automation

Development Tools: Git, GitHub, Jira, VS Code, Jupyter Notebook, Eclipse, Xcode, QTSPIM

Methodologies & Practices: Agile, Scrum, DevOps, CI/CD, Microservices Architecture, Database Design, Data Engineering, Full Stack Development, Forward-Deployed Engineering, Embedded Systems, Firmware Testing, Containerization, Software Architecture

Hackathons:

Job Flow - Gold (First Prize), Lindy's AI Agent with E2B + Anthropic | Python, AI Automation ([Project link](#))

2025

- Developed an AI-powered workflow automation tool, reducing job application time by 52% for candidates and accelerating recruiter screening by 90%

Education:

B.S. Computer Engineering | San Jose State University (SJSU), San Jose, CA

2025
